

PROFESSIONAL SUMMARY

Backend engineer with 6+ years building and owning cloud infrastructure products end-to-end. At Deutsche Bank, built and owned the backend platform that automated GCP Landing Zone provisioning for the entire organization — standardizing network, security, and compliance controls and eliminating 300+ hours of manual onboarding effort per month. Currently freelancing, building backend systems in Spring Boot for early-stage startups.

EDUCATION

- **Birla Institute of Technology and Science** Goa, India
Bachelor of Engineering in Electrical and Electronics; *Aug 2015 – July 2019*

SKILLS

- **Languages:** Java, Python, JavaScript
- **Frameworks and Libraries:** Springboot, Flask, FastAPI, React
- **Cloud & DevOps:** GCP, AWS, Kubernetes, Terraform, Github Actions

EXPERIENCE

- **Freelance** Bangalore, Karnataka
Freelance Software Engineer *June 2025 - Present*
 - **Freelance:** Built backend services for Furnprac using Spring Boot, handling supplier onboarding, product listings, and logistics integration for an early-stage startup.
- **Deutsche Bank** Bangalore, Karnataka
Associate Software Engineer *Mar 2022 - Nov 2024*
 - **Cloud Migration:** Built and owned RESTful backend services in FastAPI to automate GCP Landing Zone provisioning, standardizing network, security, and compliance controls, reducing onboarding effort for application owners migrating from on-prem to cloud.
 - **Integration & Development:** Designed and implemented IAM/SSO integration APIs connecting internal Active Directory with the application, enabling secure team onboarding and access management for GCP Landing Zones.
 - **Feature Development:** Developed an integrated activity tracking system in React to monitor and document inter-team communications and progress checkpoints, enhancing visibility and control in Landing Zone deployment.
 - **Monitoring & Observability:** Built a metrics aggregation service consuming GCP APIs, exposing usage data via REST endpoints visualized in Grafana for org-wide cloud observability.
 - **Automation & Toil reduction:** Led the development of the bank's Cloud onboarding support by building a backend automation service integrated into the on-boarding platform, eliminating over 300 hours of toil per month.
 - **CI/CD & Process Optimization:** Implemented Continuous Integration/Delivery pipeline for the Landing Zone provisioning application with GitHub Actions, resulting in a 60% reduction in deployment time, integrated them with the SDLC and Veracode pipelines for quality checks and evidence collection.
- **Deutsche Bank** Bangalore, Karnataka
Technology Analyst *July 2019 - Feb 2022*
 - **Process Optimization:** Designed and upgraded the self-service VM modification tool (eliminating the need for tedious manual vendor process and costs) and reduced the turnaround time for upgrades from 3 weeks to 5 minutes.
 - **Development:** Implemented custom VM segregation and placement logic (having dedicated hosts for Linux and Windows) reducing ESXI and Microsoft licensing costs which helped save over €2.2 million yearly.
 - **Security & Compliance:** Refactored the codebase to eliminate manual handling of API key decryption by integrating the Jasypt library in Java, enhancing security and enabling seamless management of API keys for the bank's internal VM platform.
 - **CI/CD & Process Optimization:** Established Continuous Integration/Continuous Delivery pipelines for the bank's internal VM provision portal using TeamCity, reducing the deployment time by 90%. Helped integrate SonarQube to improve code quality assurance.

PROJECTS

- **Crafting Interpreters(In Progress):** Implementing the Lox interpreter in Java — hand-written lexer, recursive descent parser, and AST-based tree-walk evaluator.
